

## issues sported

Colors not matching with the app design on login and register pages.

don't have an account and? Nothing to tell the user what is going on there

phone number should default to numbers,

is company name that valid,

too many info,

email verification,

password verification,

it crashes randomly,

I logged in without verification no notice was given whether it was successful or failed and since then

the design of the register and login form is not great and needs urgent review and also has many

the verification link after registration leads to web login or register instead of confirming registration

computer and accessories isn't working in side menu,

the UI is poor as there is no proper directing,

the app crashes at random,

the design should be improved,

the carousel isn't sliding well and clicking it does nothing,

the product description isn't showing properly,

the cart isn't working properly,

cart count on the home page is static,

the add more than one product is not working,

there are unwarranted JavaScript alerts everywhere in the app + continuous crash.

In conclusion I think a lot of work needs to go into the app to make it look standard I don't suggest

search not visible

menu should be on all pages

login and sign up need a background image

the registration page has scroll issues pls fix

there is no first name on the registration page

mobile number should default to numbers

company name not necessary

Second address not necessary

postal code not necessary

I should be able to view my profile and edit it

logout should ask if am sure before it logs out and the icon should change too

the cart is not updated when I remove from cart  
the image on the profile detail need restrain it affect the page  
computer and accessories not working  
the slider still have issues  
checkout should be disabled when there is nothing in the cart  
Details in some cart have issue  
Cart count still dont work properly  
bookmarked product dont have where to see them  
the menu dont work properly  
the extra naira is not necessary and should be removed  
back buttons dont work well

### New Corrections

social icons crash the app  
no place to see bookmarked products  
Product images not loading  
Cart count still dont work properly  
increase quantity of products dont work properly  
Check out need a preloader  
Many products images are not showing  
search text is not visible  
cart need to be on every page  
Text on details page comes with mysql escape strings  
logout icon dont change when u log out  
people should be able to get to login from the cart page
